CUDA Math Libraries

High performance math routines for your applications:

- cuFFT - Fast Fourier Transforms Library
- cuBLAS - Complete BLAS Library
- cuSPARSE - Sparse Matrix Library
- cuRAND - Random Number Generation (RNG) Library
- NPP - Performance Primitives for Image & Video Processing
- Thrust - Templated C++ Parallel Algorithms & Data Structures
- math.h - C99 floating-point Library

Included in the CUDA Toolkit

How To Use CUDA Libraries With OpenACC

CUDA data in OpenACC

You have to allocate data memory on the host and device with `alloc/cudaMalloc`. `deviceptr()` lets OpenACC know that has happened.

```
float *a;
...
err = cudaMalloc(&a, sizeof(float)*n);
kernel<<<n/32,32>>>(a,...);
...
incr(a,n);

void incr(float* x, int n){
    #pragma acc parallel loop deviceptr(x)
    for (int i = 0; i < n; ++i)
        x[i] += 1.0f;
}
```

deviceptr Data Clause

`deviceptr(list)` Declares that the pointers in *list* refer to device pointers that need not be allocated or moved between the host and device for this pointer.

Example:

C

```
#pragma acc data deviceptr(d_input)
```

Fortran

```
$!acc data deviceptr(d_input)
```

host_data Construct

If the data is on the device - say it has been *create()*ed - then `host_data use_device()` allows us to grab that device pointer on the host so that we can pass it along to some CUDA routine elsewhere.

```
a = (float*)malloc(sizeof(float)*n);
#pragma acc data create(a[0:n])
{
    #pragma acc host_data use_device(a)
    {
        incr(a,n);
    }
}

----- separate file with CUDA code -----
__global__ inckernel(float* x, int n){ ... }

void incr(float* x, int n){
    inckernel<<<n/32,n>>>(x,n);
}
```

Example: 1D convolution using CUFFT

- Perform convolution in frequency space
 1. Use CUFFT to transform input signal and filter kernel into the frequency domain
 2. Perform point-wise complex multiply and scale on transformed signal
 3. Use CUFFT to transform result back into the time domain
- We will perform step 2 using OpenACC
- Code highlights follow. Code available with exercises in:
`Exercises/OpenACC/Cuffft-acc`

Source Excerpt

Allocating Data

```
// Allocate host memory for the signal and filter
Complex *h_signal = (Complex *)malloc(sizeof(Complex) * SIGNAL_SIZE);
Complex *h_filter_kernel = (Complex *)malloc(sizeof(Complex) * FILTER_KERNEL_SIZE);
.
.
.

// Allocate device memory for signal
Complex *d_signal;
checkCudaErrors(cudaMalloc((void **)&d_signal, mem_size));
// Copy host memory to device
checkCudaErrors(cudaMemcpy(d_signal, h_padded_signal, mem_size, cudaMemcpyHostToDevice));

// Allocate device memory for filter kernel
Complex *d_filter_kernel;
checkCudaErrors(cudaMalloc((void **)&d_filter_kernel, mem_size));
```

Source Excerpt

Sharing Device Data (d_signal, d_filter_kernel)

```
// Transform signal and kernel
error = cufftExecC2C(plan, (cufftComplex *)d_signal, (cufftComplex *)d_signal, CUFFT_FORWARD);
error = cufftExecC2C(plan, (cufftComplex *)d_filter_kernel, (cufftComplex *)d_filter_kernel, CUFFT_FORWARD);

// Multiply the coefficients together and normalize the result
printf("Performing point-wise complex multiply and scale.\n");
complexPointwiseMulAndScale(new_size, (float *restrict)d_signal, (float *restrict)d_filter_kernel);

// Transform signal back
error = cufftExecC2C(plan, (cufftComplex *)d_signal, (cufftComplex *)d_signal, CUFFT_INVERSE);
```

OpenACC
Routine

CUDA
Routines

OpenACC Convolution Code

```
void complexPointwiseMulAndScale(int n, float *restrict signal,  
                                float *restrict filter_kernel)  
{  
    // Multiply the coefficients together and normalize the result  
    #pragma acc data deviceptr(signal, filter_kernel)  
    {  
        #pragma acc kernels loop independent  
        for (int i = 0; i < n; i++) {  
            float ax = signal[2*i];  
            float ay = signal[2*i+1];  
            float bx = filter_kernel[2*i];  
            float by = filter_kernel[2*i+1];  
            float s = 1.0f / n;  
            float cx = s * (ax * bx - ay * by);  
            float cy = s * (ax * by + ay * bx);  
            signal[2*i] = cx;  
            signal[2*i+1] = cy;  
        }  
    }  
}
```

Implementation note: We cast the Complex* pointers to float* pointers and use interleaved indexing

Linking CUFFT

- `#include "cufft.h"`
- Compiler command line options:

```
CUDA_PATH = /opt/pgi/13.10.0/linux86-64/2013/cuda/5.0  
CCFLAGS = -I$(CUDA_PATH)/include -L$(CUDA_PATH)/lib64  
          -lcudart -lcufft
```

Must use
PGI-provided
CUDA toolkit paths

Must link libcudart
and libcufft

Result

```
instr009@nid27635:~/Cufft> aprun -n 1 cufft_acc  
Transforming signal cufftExecC2C  
Performing point-wise complex multiply and scale.  
Transforming signal back cufftExecC2C  
Performing Convolution on the host and checking correctness
```

```
Signal size: 500000, filter size: 33  
Total Device Convolution Time: 6.576960 ms (0.186368 for point-wise convolution)  
Test PASSED
```

CUFFT + cudaMemcpy

OpenACC

Summary

- Use deviceptr data clause to pass pre-allocated device data to OpenACC regions and loops
- Use host_data to get device address for pointers inside acc data regions
- The same techniques shown here can be used to share device data between OpenACC loops and
 - Your custom CUDA C/C++/Fortran/etc. device code
 - Any CUDA Library that uses CUDA device pointers

Appendix

Compelling Cases For Various Libraries
Of Possible Interest To You

cuFFT: Multi-dimensional FFTs

- New in CUDA 4.1
 - Flexible input & output data layouts for all transform types
 - Similar to the FFTW “Advanced Interface”
 - Eliminates extra data transposes and copies
 - API is now thread-safe & callable from multiple host threads
 - Restructured documentation to clarify data layouts

$$F(x) = \sum_{n=0}^{N-1} f(n) e^{-j2\pi(x\frac{n}{N})}$$

$$f(n) = \frac{1}{N} \sum_{x=0}^{N-1} F(x) e^{j2\pi(x\frac{n}{N})}$$

FFTs up to 10x Faster than MKL

1D used in audio processing and as a foundation for 2D and 3D FFTs

cuFFT Single Precision

cuFFT Double Precision

- Measured on sizes that are exactly powers-of-2
- cuFFT 4.1 on Tesla M2090, ECC on
- MKL 10.2.3, TYAN FT72-B7015 Xeon x5680 Six-Core @ 3.33 GHz

Performance may vary based on OS version and motherboard configuration

CUDA 4.1 optimizes 3D transforms

Single Precision All Sizes 2x2x2 to 128x128x128

• cuFFT 4.1 on Tesla M2090, ECC on

• MKL 10.2.3, TYAN FT72-B7015 Xeon x5680 Six-Core @ 3.33 GHz

cuBLAS: Dense Linear Algebra on GPUs

- Complete BLAS implementation plus useful extensions
 - Supports all 152 standard routines for single, double, complex, and double complex
- New in CUDA 4.1
 - New batched GEMM API provides >4x speedup over MKL
 - Useful for batches of 100+ small matrices from 4x4 to 128x128
 - 5%-10% performance improvement to large GEMMs

cuBLAS Level 3 Performance

Up to 1 TFLOPS sustained performance and **>6x** speedup over Intel MKL

• 4Kx4K matrix size

• cuBLAS 4.1, Tesla M2090 (Fermi), ECC on

• MKL 10.2.3, TYAN FT72-R7015 Xeon x5680 Six-Core @

ZGEMM Performance vs Intel MKL

Performance may vary based on OS version and motherboard configuration

- cuBLAS 4.1 on Tesla M2090, ECC on
- MKL 10.2.3, TYAN FT72-B7015 Xeon x5680 Six-Core @ 3.33 GHz

cuBLAS Batched GEMM API improves performance on batches of small matrices

Performance may vary based on OS version and motherboard configuration

• cuBLAS 4.1 on Tesla M2090, ECC on

• MKL 10.2.3, TYAN FT72-B7015 Xeon x5680 Six-Core @ 3.33 GHz

cuSPARSE: Sparse linear algebra routines

- Sparse matrix-vector multiplication & triangular solve
 - APIs optimized for iterative methods
- New in 4.1
 - Tri-diagonal solver with speedups up to 10x over Intel MKL
 - ELL-HYB format offers 2x faster matrix-vector multiplication

$$\begin{bmatrix} y_1 \\ y_2 \\ y_3 \\ y_4 \end{bmatrix} = \alpha \begin{bmatrix} 1.0 & \cdots & \cdots & \cdots \\ 2.0 & 3.0 & \cdots & \cdots \\ \cdots & \cdots & 4.0 & \cdots \\ 5.0 & \cdots & 6.0 & 7.0 \end{bmatrix} \begin{bmatrix} 1.0 \\ 2.0 \\ 3.0 \\ 4.0 \end{bmatrix} + \beta \begin{bmatrix} y_1 \\ y_2 \\ y_3 \\ y_4 \end{bmatrix}$$

cuSPARSE is >6x Faster than Intel MKL

Sparse Matrix x Dense Vector Performance

■ csrmv* ■ hybmv*

*Average speedup over single, double, single complex & double-complex

Performance may vary based on OS version and motherboard configuration

• cuSPARSE 4.1, Tesla M2090 (Fermi), ECC on

• MKL 10.2.3, TYAN FT72-B7015 Xeon x5680 Six-Core

Up to 40x faster with 6 CSR Vectors

cuSPARSE Sparse Matrix x 6 Dense Vectors (csrmm)

Useful for block iterative solver schemes

Tri-diagonal solver performance vs. MKL

Speedup for Tri-Diagonal solver (gtsv)*

*Parallel GPU implementation does not include pivoting

Performance may vary based on OS version and motherboard configuration

cuRAND: Random Number Generation

- Pseudo- and Quasi-RNGs
- Supports several output distributions
- Statistical test results reported in documentation
- New commonly used RNGs in CUDA 4.1
 - MRG32k3a RNG
 - MTGP11213 Mersenne Twister RNG

cuRAND Performance compared to Intel MKL

Double Precision Uniform Distribution

Double Precision Normal Distribution
